The infographic features a circular portrait of Dr. R. Subashini on the left. To her right, the ISPOR logo is displayed with the tagline 'Improving healthcare decisions for better lives' and 'Tamil Nadu Regional Chapter'. Below this, a blue banner reads '10th National level Conference on CPP-IGS-2026 and Preconference Workshop 2026'. An illustration of a 'REPORT' document with a pen and a green money bag with a dollar sign is shown. A blue arrow points from the report to the money bag. Below the money bag, a green box states 'Received \$3000 fund from'. At the bottom right, the ISPOR logo is repeated with 'TN Chapter, USA'. A blue banner at the bottom left contains the text: 'prepared report of 10th National level Conference on CPP-IGS-2026 and preconference workshop 2026 and send to ISPOR Tamil Nadu Regional chapter to receive \$3000 fund from ISPOR TN Chapter, USA'.

		(57) Abstract :
		In the present investigation, a novel polyherbal ointment is formulated and screened for its anti-inflammatory activity. Physicochemical parameters viz. Appearance (colour, texture, homogeneity), Odor, pH, Viscosity, Spreadability, Consistency, Melting point, Drug content uniformity, Specific gravity, Loss on drying (moisture content). In vitro drug release, Extrudability, Wettability and Stability were evaluated for the formulated novel polyherbal ointment. This novel poly herbal ointment comprises 10 % of Allium sativum peel extract, 10 % of Myrsine fragrans seed extract, 10 % of Vines negundo leaf extract, 10% of Piper nigrum fruit extract, 5% of Eucalyptus globulus oil, and 5% of Soluble Cinnamomum camphura. It showed highest drug release of 89.01 ± 0.01 % after 6 h of in vitro release study as compared to other formulations. Using in vitro protein denaturation egg albumin method, the inhibition of protein denaturation of the prepared novel polyherbal ointment at various concentrations viz. 50.11 g/mL, 100.11 g/mL, 250.11 g/mL, 500.11 g/mL, was found to be 81 %, 69 %, 61 %, and 57 % respectively (IC50 value: 212.31 11g/mL). Inhibition of haemolysis of the prepared novel polyherbal ointment was studied at various concentrations viz. 25.11g/mL, 50.11g/mL, 75.11g/mL, and 100.11g/mL by in vitro HBC (Human Red Blood Cell) membrane stabilization method was found to be 93 %, 88 %, 85 %, and 81 % respectively (IC50 value: 15.06 11g/mL). The composition of optimized polyherbal formulation significantly inhibited the inflammation to the extent of 75.63% when compared to the control and standard topical base group after 3 h from carrageenan injection. The statistical data analysis was done by one-way analysis of variance followed by Dunnett's test using GraphPad version 7 (p<0.05). Thus, the present study concluded the more significant anti-inflammatory activity of the prepared novel polyherbal ointment.

Abstract :
 DETAILED DESCRIPTION OF THE INVENTION 1. Microneedle Structure • Length: 300–800 µm • Shape: مخروط-shaped (conical or pyramidal) • Material: Biodegradable polymers (e.g., hyaluronic acid, PVP, PLGA) • Function: Penetrates epidermis without reaching pain receptors 2. Nanoparticle Composition • Type: Polymeric nanoparticles / lipid nanoparticles • Size: 50–300 nm • Encapsulation efficiency: 70–95% • Drug: Cefixime trihydrate Preparation methods: • Emulsion-solvent evaporation • Nanoprecipitation • Ionic gelation 3. Integration of Nanoparticles into Microneedles • Nanoparticles are uniformly dispersed within the microneedle matrix • Fabrication via micro-molding technique • Drying under controlled conditions to preserve drug stability 4. Mechanism of Action 1. Microneedles penetrate the wound tissue 2. Needles dissolve in interstitial fluid 3. Nanoparticles are released into wound bed 4. Cefixime is released in a sustained manner 5. Antibacterial activity reduces infection 6. Promotes tissue regeneration and healing 5. Additional Functional Layers • Hydrogel base layer: Maintains moist environment • Protective film: Prevents contamination • Optional sensors: For pH or glucose monitoring ADVANTAGES OF THE INVENTION • Minimally invasive and painless application • Sustained and controlled drug release • Reduced frequency of dressing changes • Targeted antibacterial action • Improved patient compliance • Enhanced wound healing in diabetic patients • Reduction in antibiotic resistance risk

ABSTRACT
Inflammation, demyelination, and axonal damage within the central nervous system are hallmarks of multiple sclerosis (MS), a chronic, immune-mediated neurodegenerative disease. Growing interest has been focused on the function of diet in regulating disease activity and symptom development, even though the etiology of multiple sclerosis is still complex and involves genetic, environmental, and immunological factors. According to new research, dietary factors may have an impact on oxidative stress, gut microbiota composition, inflammatory pathways, and general brain health—all of which are pertinent to the pathophysiology of multiple sclerosis. The present state of knowledge on nutritional interventions in the treatment of multiple sclerosis is examined in this study, along with the possible advantages and disadvantages of different dietary strategies, such as the Mediterranean diet, ketogenic diet, low-fat diet, and intermittent fasting. In relation to immune modulation and neuroprotection, the functions of particular nutrients—such as vitamin D, omega-3 fatty acids, antioxidants, and polyphenols—are examined. Furthermore, the significance of gut health and the newly discovered gut-brain axis in multiple sclerosis are examined, emphasizing the potential impact of dietary decisions on microbial balance and systemic inflammation.

INTRODUCTION
Multiple sclerosis (MS), a chronic, central nervous system (CNS) neuroinflammatory disease, immune-mediated oligodendrocyte demyelination ultimately leads to axonal injury, and can occur focally within white matter or as diffuse lesions within grey matter [1]. It is complex, and its etiology may be influenced by a number of metabolic or environmental variables [2]. Eating habits and lifestyle choices can either worsen or improve MS symptoms by modifying inflammation, interacting with brain cells, and influencing the commensal gut microbiota. Nutrition is now acknowledged as one of the potential risk factors for the development of MS and may have uses in its management and treatment [3]. Malnutrition is a common condition in MS patients, as evidenced by clinical signs of weight loss, overweight, or obesity, as well as vitamin deficiencies [4]. Malnutrition in MS patients has been linked to immune system dysfunction, which impairs cognitive function and causes a chronic inflammatory state that causes relapses more frequently and accelerates the disease's development [5]. Furthermore, dietary status has a negative impact on how well medication therapy works [6]. Certain diets seem very restricted and challenging to apply over time, which could result in nutrient shortages. Even though the different diets differ, they all share key characteristics, like avoiding processed meals, foods high in glycemic index, and foods high in saturated fat, cutting back on dairy and meat, and consuming more fruits and vegetables [7].

TYPES OF MULTIPLE SCLEROSIS
Relapsing-remitting MS: RRMS is the original diagnosis for about 57% of MS patients. In RRMS, there are times of remission, when symptoms partially or completely disappear, after episodes of new or worsening symptoms [8].

Fig. 58.1 Relapsing-Recurring MS

Primary progressive MS: Primary progressive multiple sclerosis progressively worsens over time. There are either few or no remissions and no distinct episodes of symptoms. Additionally, MS medications are less effective for this type of MS. Ten percent or so of MS patients have this kind of MS.

Fig. 58.2 Primary progressive MS

About the Authors

Mr. Jaikumar R.D. is currently working as an Associate Professor in the Department of Pharmaceutics at Padmaavathi College of Pharmacy, Dharmapuri. He completed his D.Pharm at Padmaavathi College of Pharmacy and pursued his B.Pharm and M.Pharm at JKKMMRF's Anna Sampoorani Ammal College of Pharmacy, Komarpalayam, Namakkal. He is pursuing his Ph.D at The Tamil Nadu Dr. M.G.R. Medical University, Chennai, and has 8 years and 2 months of academic experience. His research interests include nanotechnology and innovative pharmaceutical research.

Mr. Vinoth R. is currently working as an Assistant Professor in the Department of Pharmaceutics at Swamy Vivekanantha College of Pharmacy. He holds Bachelor's and Master's degrees in Industrial Pharmacy with distinction from Annamalai University, Tamil Nadu, and has over 3 years of academic and research experience. His expertise includes formulation development, industrial pharmacy, and advanced drug delivery systems. His research focuses on AI-driven drug discovery, nanoformulations, pharmacovigilance, and pharmaceutical process optimization, with over 20 publications in reputed journals.

Mr. Jayaram N. is currently working as an Assistant Professor in the Department of Pharmaceutics at Thanthi Roosevelt College of Pharmacy, Perambalur. He has 3 years and 8 months of teaching experience in pharmaceutical sciences. He completed his undergraduate (2020) and postgraduate (2022) degrees at Annamalai University, Chidambaram. His academic background and teaching experience support his involvement in pharmaceuticals education, with a focus on strengthening students' understanding of pharmaceutical concepts and practical applications.

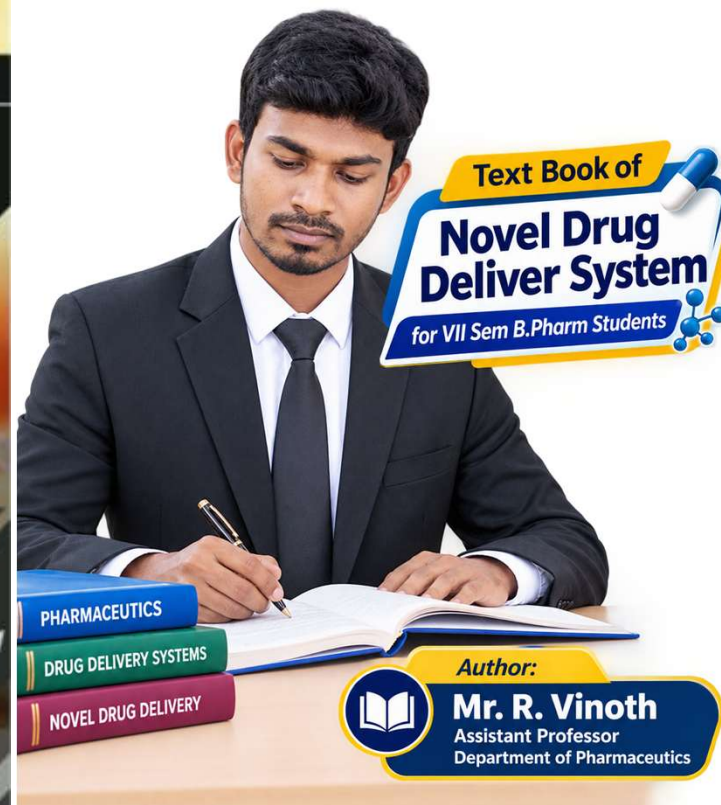

Mr. Teenadhayalan R. is currently working as an Associate Professor at See Bhavani College of Pharmacy, Kandappurkuzhi, Cuddalore. He has 2 years of teaching experience in the field of pharmacy. He completed his undergraduate and postgraduate studies at Annamalai University, Chidambaram, where he is currently pursuing his Ph.D. His academic role focuses on contributing to pharmaceuticals education and helping students build a strong foundation in both theoretical and practical aspects of pharmaceutical sciences.
